OLTD 510 Reflection of Evidence #1- Research Methods- Glossary of Terms

For my first piece of evidence for OLTD 510, I have chosen my infographic on the glossary of terms for research methods and methodologies. This assignment required me to view a 1-hour video provided by Rachel Moll, Associate Dean of VIU. I was to provide definitions for 12 terms which I felt would be helpful to me for my research in MEDL 680 and 690.

The OLTD outcome which best suits this activity is :

Be familiar common terms, definitions, and elements related to online environments

By familiarizing myself with research terms and definitions, it will allow me to be mindful of the work to be done for my Action Research in MEDL 680 and 690. Developing a Major Project Paper as well as a Final Project will require specific research in and of the field, as well as make considerations for accurately developing a project to support the findings of the paper that supports my critical challenge question.

This outcome is important because it will help me to choose the appropriate research articles, papers, and theories around language and learning for my Major Project Paper. It will also support my Final Project, which is a redesign of an online French 10 course, by having me consider the data collected to properly build my course. It will also encourage me to consider the data collection techniques for Action Research as well as the reliability of the data collected to help me with my final project build.
